TROUBLE SHOOTING

Performance Issue, Uneven or Unstable- Make sure all nuts and bolts are tight on the product. If they are, then loosen all nuts and bolts 1 full turn counter-clockwise, then go back and tighten each bolt only ½ turn tight. Then do a final tighten turn for another ½ turn tight. Next, Make sure there are not any missing nuts or bolts. Third, ensure all parts on the product are not broken or defective. Finally, Re-read the assembly instructions or watch the product demonstration video to ensure you have correctly assembled or are using the product properly with factory specifications.

Missing Parts- The pictures, videos and images shown in this manual might have changed style or count due to the product being redesigned. So in rare cases the part may no longer be included or of a different style. However, if you think you are missing a part that is necessary to the assembly and use of your product, then first carefully double check all packaging for any parts you think are missing. Some parts might be hiding in the packaging or loose in an inner box.

COMPANY INFORMATION AND SUPPORT

User Manual Model# AP3372

Speaker Wall Mount Brackets

ASSEMBLY INSTRUCTIONS

Step 1 - Align the two tilt adjustment arms and insert the top arm into the bottom arm and insert the pin into one of the holes. The amount of tilt that you want determines which hole to insert the pin into, please see **Figure 1**.

Step 2 – As shown in **Figure 2**, the speaker post mount is screwed in one of the 3 different holes on the adjacent steel bar. It depends on your preference to where you would want the mount to be screwed in. You may use a wrench to counter the bolt while tightening the speaker post mount.

Step 3 – To mount the bracket to the wall, take the bracket and measure the height if it suits your preference. Mark the holes to where you should drill to mount the brackets. Make sure that everything is leveled to avoid the bracket leaning on one side and making it a risk for your items to fall. See **Figure 3**.

Step 4 – Drill into the marked holes and insert the threaded plastic anchors to each hole, a hammer might be needed to insert these.

Step 5 – Take the bracket and mount it on the wall, align each hole on the wall to the brackets. Screw in first one at the top and one at the bottom (do not tighten immediately). Next is insert all the other screws in the holes and adjust the tightness of each screw one by one, this is to make sure that one side is not over tightened and the brackets will be leaning over to one side.

Step 6 – The loop on the side is used to insert the cables to be connected to the back of the speakers. (See **Figure 4**).

Step 7 – For safety reasons, please always make sure to test the stability and safety of the product before use. Double check all nuts and bolts, knobs and connectors, make sure that these are tight and securely fastened before use of your product. Test the product under light use or light loads the first time to confirm assembly and structure of the product is correct.

Always check the integrity of the speaker wall mount bracket before mounting anything. You may hold onto the speaker post mount and grip it tightly and wiggle the brackets to test.
