

PRODUCT SPECIFICATIONS

For current product specifications, please to go www.griffin-stands.com and type the model number into the search bar. Locate the product listing to view the current factory specifications.

TROUBLE SHOOTING

Performance Issue, Uneven or Unstable- Make sure all nuts and bolts are tight on the product. If they are, then loosen all nuts and bolts 1 full turn counter-clockwise, then go back and tighten each bolt only ½ turn tight. Then do a final tighten turn for another ½ turn tight. Next, Make sure there are not any missing nuts or bolts. Third, ensure all parts on the product are not broken or defective. Finally, Re-read the assembly instructions or watch the product demonstration video to ensure you have correctly assembled or are using the product properly with factory specifications.

Missing Parts- The pictures, videos and images shown in this manual might have changed style or count due to the product being redesigned. So in rare cases the part may no longer be included or of a different style. However, if you think you are missing a part that is necessary to the assembly and use of your product, then first carefully double check all packaging for any parts you think are missing. Some parts might be hiding in the packaging or loose in an inner box.

COMPANY INFORMATION AND SUPPORT

THANK YOU FOR YOUR PURCHASE

User Manual Model# C80

Straight Cymbal Stand

ASSEMBLY INSTRUCTIONS

Step 1 – Take the tripod section of the stand and spread the legs by using two (2) hands and tighten the knob to secure the legs (See **Figure 1**) Please note that under extension of the tripod legs may cause instability while over extension may cause stand failure.

Step 2 – Unscrew the knob on the top of the tripod stand and insert the chrome middle section all the way down (make sure that the middle pipe is straight down and use force if resistance is felt while inserting the pipe). Adjust the length of the chrome pipe you inserted and use the screw to secure the height of the stand as shown in **Figure 2**. With this you can use the included memory lock and adjust it to your preferred height.

Step 3 – Loosen the knob at the top of the tripod stand and insert the height adjustment rod. (See **Figure 3**)

Step 4 – Remove the wingnut on the very top and place your cymbal on top. Place back the cymbal felts and the wingnut as seen on **Figure 4**.

Step 5 – Adjust the angle of the cymbal using the height adjustment rod. If your stand is wobbly or unstable, make sure that the legs are spread wide or/and bring down the height.

Step 6 – For safety reasons, please always make sure to test the stability and safety of the product before use. Double check all nuts and bolts, knobs and connectors, make sure that these are tight and securely fastened before use of your product. Test the product under light use or light loads the first time to confirm assembly and structure of the product is correct.
