

PRODUCT SPECIFICATIONS

For current product specifications, please go to www.griffin-stands.com and type the model number into the search bar. Locate the product listing to view the current factory specifications.

TROUBLE SHOOTING

Performance Issue, Uneven or Unstable- Make sure all nuts and bolts are tight on the product. If they are, then loosen all nuts and bolts 1 full turn counter-clockwise, then go back and tighten each bolt only ½ turn tight. Then do a final tighten turn for another ½ turn tight. Next, Make sure there are not any missing nuts or bolts. Third, ensure all parts on the product are not broken or defective. Finally, Re-read the assembly instructions or watch the product demonstration video to ensure you have correctly assembled or are using the product properly with factory specifications.

Missing Parts- The pictures, videos and images shown in this manual might have changed style or count due to the product being redesigned. So in rare cases the part may no longer be included or of a different style. However, if you think you are missing a part that is necessary to the assembly and use of your product, then first carefully double check all packaging for any parts you think are missing. Some parts might be hiding in the packaging or loose in an inner box.

COMPANY INFORMATION AND SUPPORT

THANK YOU FOR YOUR PURCHASE

Thank you for purchasing the Griffin Rack Mount Rolling Stand. Your product comes with a 1 year factory warranty from purchase date. Please read all assembly instructions prior to assembling your new cart. Pictures that may aid in assembly can be found by going to www.griffin-stands.com and typing WS993 into the search bar.

User Manual Model# WS993

Rack Mount Rolling Stand

ASSEMBLY INSTRUCTIONS

Step 1 – Take the bottom support bar (Part A) and screw in the wheels provided as shown in **Figure 1**.

Step 2 – Take the cross-member bar (Part B) and connect to the bottom support bar (Part A). These has locking clamps that fits through the holes of the bottom support bar and fix in place with a bolt (See above **Figure 2**).

Step 3 – Take the upright support bar (Part E) and connect to assembly done in Step 2 as shown in **Figure 3**. Once done take the cross-member bar (Part D) and place near the where the upright support bar angles out. Screw this in tightly and set aside.

Step 4 – Take the Right and Left side mixer mount bar (Part F) and the round cross bar (Part G), connect these as shown in **Figure 4**. Once done take another cross-member bar (Part H) and screw into the front part of Right and Left side mixer mount bar (Part F) (See **Figure 5**).

Step 5 – Now take the piece assembled in Step 4 and place over the piece assembled in Step 3 and secure using a bolt screwed in the center shown in **Figure 6** above.

Step 6 – Place the knob (Part J) at the side of the stand, this will allow you to adjust the angle of the rack mount stand to your preference. (See **Figure 7**).

Step 7 – For safety reasons, please always make sure to test the stability and safety of the product before use. Double check all nuts and bolts, knobs and connectors, make sure that these are tight and securely fastened before use of your product. Test the product under light use or light loads the first time to confirm assembly and structure of the product is correct.

Please note that hardware bolts to assemble the stand maybe screwed into the parts themselves. So, for example, if you are missing a bolt that goes into the bottom base support tube, then look at the end of the bottom base support tube and you will see that hardware bolt is already screwed into the stand. All you

need to do is unscrew that bolt and then screw it back in to assemble the two parts that connect on that end. If the stand is wobbly loosen up each bolt on the stand slightly. Then tighten up 1 bolt all the way as much as it will tighten. After that start on the next bolt that is completely opposite of the 1st bolt that you tightened. For example, if you first tightened up the bolt in the top right of the stand, then next start to tighten up the bolt on the bottom left. Keep going in order of the opposite bolt that you tightened up last. Once you are done, repeat the process of going through and tightening up the bolts one more time.
